PROJECTS

Forced-execution of Python binaries using CPython

April 2021 – June 2021

Research Project - UVA

- Customized CPython interpreter to enable execution of all program flows. Achieved 100% coverage for 100 sample python binaries.
- Crafted a logging mechanism within CPython to track dataflows and coverage on run-time.

Tracking fine-grained file changes at kernel level

October 2019 – December 2019

Research Project - LUMS

- Wrote a **kernel-module** to hook and monitor sys-calls modifying targeted files.
- Reduced overall log size from tracking file writes by 95% by crafting a Python program to process logs with accommodating file-diffs in system provenance.

Obfuscation of code by flattening of control flow of binaries

June 2019 – September 2019

Research Project - LUMS

- Made **LLVM passes** to analyze and shuffle program control flow to obfuscate it. No impact on correctness of resulting program executions.
